No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The cinvention relates to a purified muscle ring finger (MURF) protein, selected from MURF-1, MURF-2 and MURF-3. The MURF proteins of the invention are involved in microtubule and intermediate filament stabilisation of striated muscle cells and have cardiant activity. The MURR proteins are useful for screening a candidate substance for MURR proteins are useful for screening that continues, homodimerisation of MURF-1, MURF-2 or MURF-3 tabilisation of MURF-1, MURF-2 or MURF-3 tabilisation of microtubules, interaction of MURF with intermediate filaments, e.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF.

The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as antigens to immunise animals for the production of antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel muscle ring finger protein useful for drug screening, and diagnosing and treating diseases, particularly cardiomyopathies

                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is a human protein coding sequence. The human protein, preferably originated from tumour cell line, is applicable as a drug, a reagent for studying intracellular protein networks and a protein source for screening proteins for binding low molecular weight drugs. The human protein coding sequence is useful for gene diagnosis and gene therapy, expression vectors and transformant cells for detection of ligands and receptors.
